

Elegance & Excellence in Drapery Motorization

SILENT TRAC

by **CURRENT**

Silent Trac uniquely marries elegance and technology into a clean, user-friendly motorized drapery track, adding a sense of grandeur and drama into a space with boastfully sophisticated aesthetic design as well as ground-breaking integration technology.

With a motor that operates at the same noise level as a quiet room, plus programmable soft-stop positions, Silent Trac is a truly whisper-soft option for the home.

Waking to gradual natural light is proven to help the brain 'wake up', but leaving curtains open at night subjects homes to the fishbowl effect. With Silent Trac, use optionally integrated sensors or timers to open and close the curtains whenever is right for you.

Drapery provides a way to merge traditional luxury with contemporary modernism, without sacrificing light control or operability.

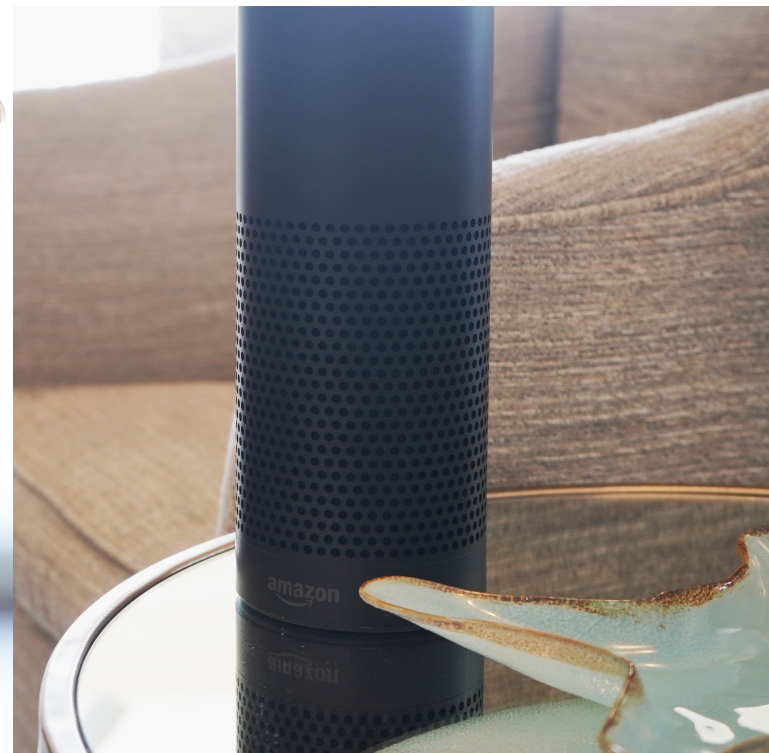

Why Current Products Corp?

Current Products Corp. was founded on the principle of innovation through teamwork and a recognition that the best products are created by groups with a diversity of perspective.

The Current Products Corp. team is comprised of product design engineers from a variety of industries, from aerospace to office furniture, and was founded by an innovative entrepreneur with a gift for contemporary aesthetic and technological design.

Function and intuitive operability are the hallmarks of every Current Products Corp. product, as everything is designed with a focus on ergonomics, contemporary aesthetics, and user-friendly interfaces.
